

GitHub Documentation Assistant

Ask anything about GitHub — repositories, billing, authentication, security, organizations. I can also create and check support tickets.

How do I set up two-factor authentication on GitHub?

Knowledge Query

To set up two-factor authentication (2FA) on GitHub, follow these steps:

1. Sign in to your GitHub account and navigate to **Settings**.
2. In the **Security** section of the sidebar, click **Authentication security**.
3. Under "Two-factor authentication", select **Require two-factor authentication for everyone in your organization** (if you're an organization owner) or enable 2FA for your personal account.
4. Click **Save** to confirm the change.

Note: If you're an organization owner, you'll need to follow the additional steps outlined in [CHUNK 3] ([Requiring Two Factor Authentication In Your Organization](#)) to require 2FA for your organization.

Also, make sure to use a strong and unique password when creating your GitHub account, as recommended in [CHUNK 4]([Getting Started With Your Github Account](#)).
